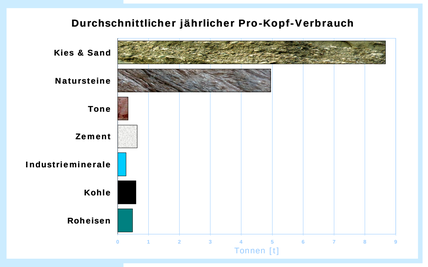
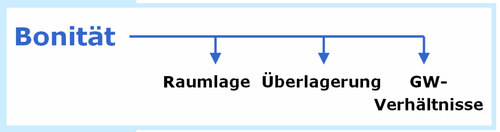
Rohstoffgeologische Evaluierung von Kiessandvorkommen im Rahmen des österreichischen Rohstoffplans

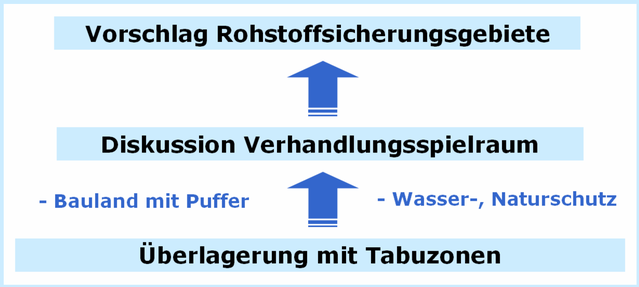
M. Heinrich, S. Pfleiderer, T. Untersweg & L. Weber

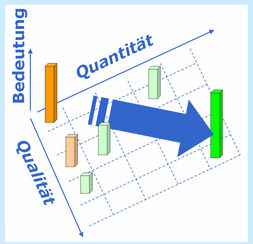


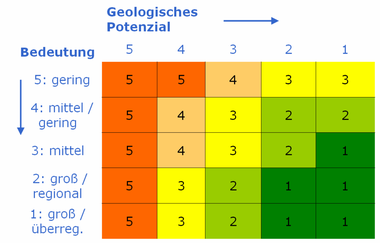
Ziel des österreichischen Rohstoffplanes ist es, den Zugang zu wertvollen Rohstoffen für künftige Generationen zu sichern

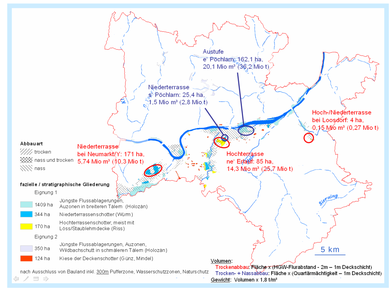
Phase II: Detailabgleich mit den Bundesländern



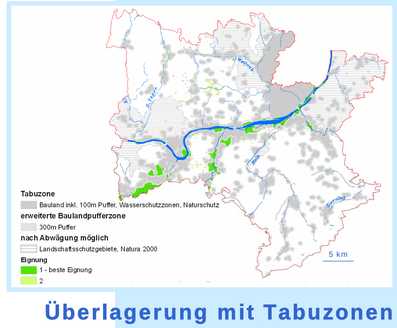




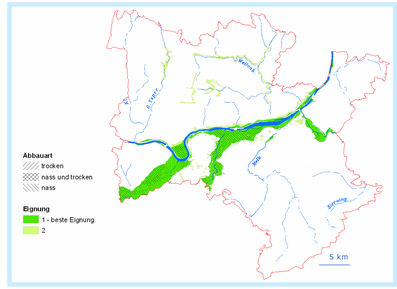




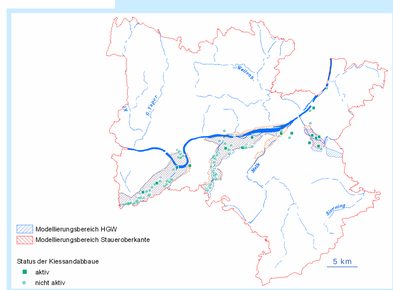
Geologische Restflächen nach Ausschluss der Tabuzonen



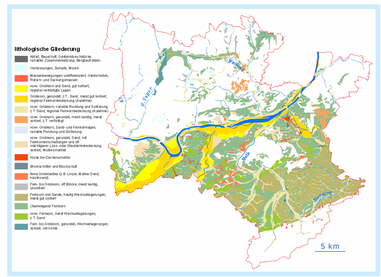
Überlagerung mit Tabuzonen und den Abbau erschwerenden Festlegungen



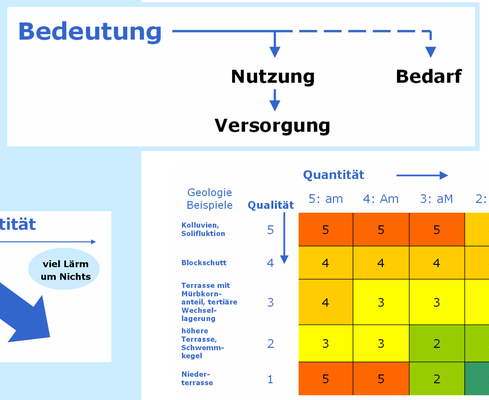
Geeignete Rohstoffzonen und Abbauart

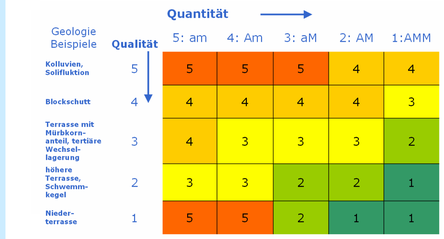


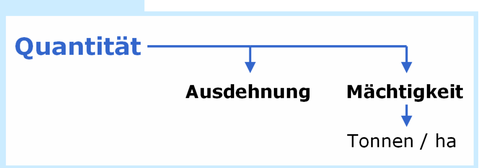
Verteilung der Kiessand-Abbaue und Modellierungsbereiche Stauroberkante und HGW

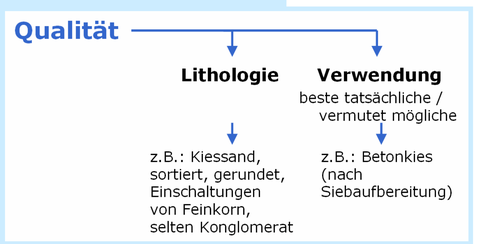


Lithologische Attributierung der Lockergesteinskarte

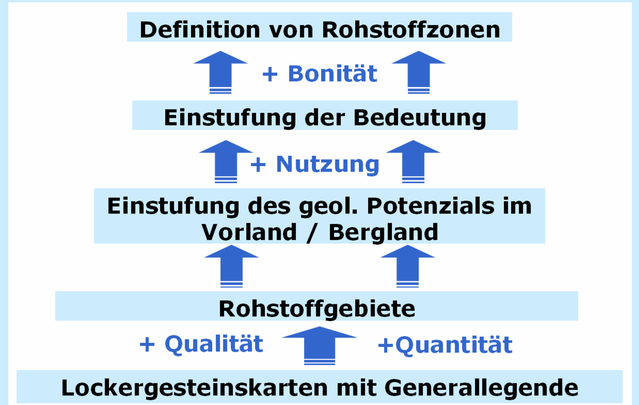


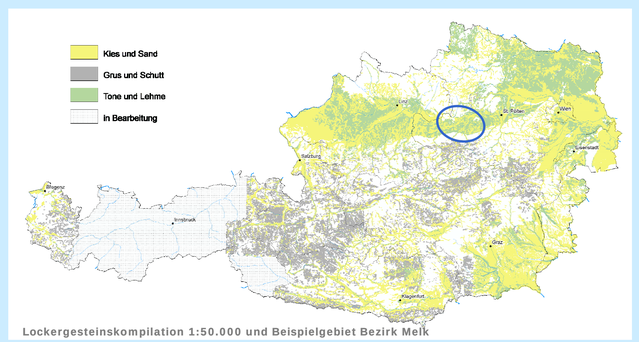






Phase I: Geologische Bearbeitung





Lockergesteinskompilation 1:50.000 und Beispielgebiet Bezirk Melk
